## Duplex Two Wire Fire Alarms

### Contractor Kit, Alarm in a Box

Consisting of either a 2 zone or 4 zone panel, six multi-function devices, two call points and a detector/sounder head removal tool.

- FP-024 2 Zone Contractor Kit
- FP-025 4 Zone Contractor Kit

### Panels

- FP-020 2 Zone
- FP-018 4 Zone
- FP-019 8 Zone

### Batteries

- FPA-070 2.1Ah
- FPA-071 3.2Ah

2&4 Zone panels require 2 x FPA-070  
8 Zone panel requires 2 x FPA-071

- Easy to install
- Only 2 core cable required
- Fully compliant with European detector type specifications and is suitable for installations compliant with BS5839: PART 1 :1988
- Continuous self-calibration

**FPA-1016**

Duplex head removal tool

**FPA-1027**

Duplex surface industrial horn sounder 95dBA

**FPA-1010**

Duplex combined heat/smoke detectors

**FPA-1011**

Duplex surface re-settable call point

**FPA-1009**

Duplex combined heat/smoke detector and 90dB sounder

**FPA-1013**

Duplex red 100dB stand alone internal sounder

This two-wire conventional fire alarm system is installed using only one pair of wires, eliminating the need for a dedicated sounder circuit.

The panel differentiates between a call point and a detector alarm and can accommodate 32 devices per zone.

The two-wire panel also features a fault monitoring display for each zone, a one man walk test facility, and zones are configured without the need to use resistors or capacitors on unused zones.
